About Me

I have always been interested in mastering the IT field, and the time has finally come. In choosing a path, I'm confident: the web development profession allows me to deepen my professional skills, pursue continuous learning, and grow broadly. At the moment I plan to focus on deepening frontend knowledge with the React framework, then add Vue knowledge and broaden into full-stack development. Currently, I'm improving my React skills, studying JS theory, and gaining practical experience with Vue.

I also study learn.javascript.ru and w3schools.com.

I obtain additional knowledge and skills from various sources on YouTube.

Among my strengths are teamwork and communication: I easily find common ground with colleagues and clients; ability to independently search for resources that help solve problems or improve my proficiency; time management and planning: I can break tasks into stages, set goals, and follow a schedule; experience in various disciplines: my skills will help the project grow and develop; flexibility and adaptability: I quickly master new technologies and tools, enjoy learning new things, experimenting, and applying them; self-organization and initiative: I can stay focused on goals and am not afraid to take responsibility.

I am open to internships, office, or remote work opportunities.
